Client: Microsoft (USA)

Role: D365 FGO Developer
Duration: Jan 2020 – Sep 2021
Description: Dynamics Axapta is an ERP product from Microsoft. The Sustenance Engineering team provides stabilizing support and customer assistance, helping release service packs and maintain product quality. Microsoft AX D365 is a comprehensive ERP solution for midsize and large organizations, empowering users to manage change and compete globally.
Responsibilities:

- Understood functional and technical requirements to deliver effective solutions.
- Followed Microsoft SE procedures for solution development.
- Analyzed reported issues and coordinated with the core team.
- Documented technical designs and specifications.
- Performed bug fixing in modules such as Accounts Payable, General Ledger, Budgeting, and Expense.
- Worked with D365 tables, classes, forms, views, and labels.
- Applied X++ coding and SQL database expertise.
- Debugged issues in D365 and used porting tools effectively.
- Investigated issues to determine configuration errors or code defects and provided fixes.
- Published pull requests and prepared inner and outer loop machines.

Project: Danish Agro
Team Size: 6 Client:
Denmark
Role: D365 FGO Developer
Duration: May 2019 – Jan 2020
Description: Danish Agro Group consists of agro-industrial companies in Denmark and abroad, focused on delivering value- added solutions in close collaboration with customers.
Responsibilities:

- Developed and modified D365 user interfaces and reports.
- Participated in build and deployment processes.
- Met with stakeholders to understand technical environments, business drivers, and future requirements.
- Proposed original approaches to improve or replace existing processes.
- Collected and understood requirements.
- Reviewed Functional Design Documents (FDDs).
- Prepared Technical Design Documents (TDDs) and test data for functional testing.
- Reproduced client-reported issues and investigated root causes.
- Determined whether issues were configuration-related or code defects.
- Performed development and unit testing.

Project: System Security
Team Size: 5
Client: SE2 (USA)
Role: D365 FGO Developer
Duration: Dec 2014 – May 2019

Description: System Security Module is an internal application created for SE2 internal users. It is a ticketing system named “Tesla,” used to manage access rights, home directories, mailboxes, and Lync configurations for new joiners throughout their entry- to-exit process.
Responsibilities:

- Understood the existing functionality of the application.
- Handled change requests as per user requirements.
- Performed bug fixing and enhancements.
- Conducted unit testing and provided application support.

Project: Master Rewards and AOK Order
Team Size: 5
Client: Master Brands (USA)
Role: .NET Developer Duration:
Jun 2012 – Jul 2013
Description: The Master Rewards program awards designers with points based on product purchases. Points are calculated by Masterbrand IT systems (Master Rewards - DTS) for each eligible cabinet box sale. AOK is a key application used by customers to enter order details for timely delivery.
Responsibilities:

- Understood the existing functionality of the applications.

- Handled change requests as per user requirements.
- Performed bug fixing and enhancements.
- Resolved user issues and provided solutions.
- Conducted unit testing and provided application support.

Project: Clear Decisions

Team Size: 4

Client: A.C. Nielsen (USA)

Role: .NET Developer Duration:

Jun 2011 – Jul 2012

Description: The Nielsen Company is a global leader in marketing information, audience measurement, and business media products and services. Nielsen measures markets, media, and consumer behavior across industries worldwide. The company integrates data from various sources to generate strategic insights and tailored recommendations, helping clients make informed business decisions.

Responsibilities:

- Understood the existing functionality of the applications.
- Handled change requests (CRs) as per user requirements.
- Performed bug fixing and enhancements.
- Conducted unit testing and provided application support.

Environment: Windows 10, D365 FGO X++ 2022, SQL Server 2021, Visual Studio 2022, TFS
